# PROPOSAL OVERVIEW

## Objective

The main objective of this project was to create a mentorship program that encourages high school girls to pursue careers in STEM fields (Science, Technology, Engineering, and Mathematics). Through interactive workshops, hands-on learning, and guidance from professional female mentors, the program aimed to inspire, empower, and provide participants with foundational knowledge in data science, programming, and basic artificial intelligence. Additionally, participants applied what they learned by developing a final project to highlight the real-world value of STEM skills.

## Why This Matters

Girls are often excluded from STEM early on due to stereotypes and lack of access. Empowering them with skills and mentorship changes that trajectory.

# TARGET AUDIENCE

## High school girls

The program was designed for Peruvian high school girls in 10th and 11th grade (ages 14–16) who had access to a mobile device or computer and a stable internet connection. Participants came from diverse regions across the country, representing both urban and rural areas.

A total of 27 students from 12 regions of Peru participated, including Lima, Cusco, Piura, Ica, Puno, Tacna, Áncash, Apurímac, Cajamarca, Huancavelica, Lambayeque, and La Libertad—representing both urban and rural communities.

# HOW THE BOOTCAMP WORKED

## Mentoring

The bootcamp ran for five weeks and offered a mix of workshops, mentoring, and personalized guidance. Each Saturday, participants joined live virtual sessions focused on one of four STEM areas: Technology, Mathematics, Science, and Engineering. Every area was led by a pair of professional female mentors, supported by volunteers.

The mentors designed and delivered engaging classes, shared their academic and career journeys, and supported students through Q&A sessions and a final project.

Additional one-on-one mentoring sessions were available throughout the program, giving girls the chance to ask questions, receive guidance, and explore their interests more deeply.

At the end of the bootcamp, participants presented final projects based on what they learned—demonstrating not just technical skills, but also creativity and real-world application.

# IMPACT MEASUREMENT

- 27 girls from 12 regions of Peru completed the program
- Participants gained practical knowledge in STEM areas such as programming, biotechnology, industrial safety, and applied mathematics
- Over 10 live sessions were held, including workshops, mentorship circles, and personalized guidance
- Girls created and presented final projects that applied STEM concepts to real-world challenges in their communities
- Feedback from students highlighted increased motivation, confidence, and interest in pursuing STEM degrees
- Many participants expressed that the bootcamp helped them clarify their academic goals and see themselves in science and tech fields

# TEAM STRUCTURE

Road to Be a STEM Woman was developed under the Social Projects Department of Data Science Research Peru (DSRP). The program was co-led by Carolina Saavedra and Alicia Acevedo, and implemented thanks to a dedicated team of 8 mentors and 5 volunteers, all women from STEM fields.

Each STEM area—Technology, Mathematics, Science, and Engineering—had its own team of professionals and support volunteers. Mentors were selected through a public call, and brought both academic expertise and lived experience to guide participants through the bootcamp.

This all-women team was key to creating a safe, empowering space for the girls to learn, ask questions, and see themselves reflected in STEM leadership.

# IMPACT MEASUREMENT

Measuring the impact of our initiatives is essential to demonstrate effectiveness and ensure accountability.

## Keys Learning

The program taught us that early exposure to STEM is powerful—but representation and mentorship are just as essential. When girls see women in science and tech, they see what's possible. Road to Be a STEM Woman showed us that inspiration becomes action when it is intentional, inclusive, and community-led.

## Sharing Success Stories

We aim to replicate the bootcamp in more regions, strengthen our mentorship network, and secure partnerships to offer data packages and better access to rural participants. We are also exploring long-term tracking of participants' academic paths to measure real impact.

Road to Be  
a STEM  
Woman

# CONCLUSION

Road to Be a STEM Woman was more than a bootcamp—it was a space where girls discovered their potential, asked bold questions, and imagined new futures in science and technology. By connecting them with real mentors, hands-on learning, and a supportive community, we helped spark interest that can grow into lifelong ambition.

This is just the beginning. With continued support and collaboration, we can build a future where every girl feels seen, capable, and ready to lead in STEM.

# SOME PHOTOS OF THE PROGRAM

## Bootcamp Road to Be a STEM Woman

**¿Qué es?**

Programa de mentoría orientado a promover la participación y el interés de estudiantes mujeres en últimos años de secundaria para motivarlas y direccionarlas en conocimiento teórico-práctico a estudiar una carrera STEM, por medio de talleres y capacitaciones, las cuales serán dictados por mentoras que se especializan en el área STEM. Además participarán activamente creando un proyecto final donde apliquen lo aprendido en cada etapa del programa.

**¿A quién va dirigido?**

Adolescentes de cuarto y quinto de secundaria.

**Requisitos**

- Adolescentes que asistan a la escuela.
- Contar con buena conexión a Internet.
- Contar con un dispositivo para ingresar a Zoom.
- Ser responsables, proactivas.

**Beneficios**

- Aprender sobre diferentes ámbitos STEM.
- Mentorías personalizadas.
- Acceso a material didáctico.
- Conocer sobre el mundo laboral STEM-Networking.
