Inclusive Recycling – Braille Learning Materials

What did the project consist of?

We coordinated a social impact project to create braille educational materials for blind children using recycled materials. Working with CEBE and CREBE Jesús de Nazareno in Piura, we combined inclusive education with sustainability. Volunteers helped craft tactile learning tools that not only taught reading—but also promoted care for the environment and empathy through action.

Importance of Volunteering

WHAT DID THE VOLUNTEERS LEARN?

Before starting the creation process, volunteers received training in braille literacy, including the use of braille writing machines and techniques to distinguish sounds and textures—essential skills for developing meaningful tactile materials. The training also covered inclusive education principles and environmental awareness, ensuring that every item created was not only functional, but also respectful of the learning needs and dignity of the children.

What was the process like to carry out the project?

TASK PLANNING

We began by mapping key actors and distributing tasks among the project team. Each member took on a specific role—from training design and logistics to volunteer coordination—ensuring a smooth workflow and shared responsibility.

CALL FOR VOLUNTEERS

Next, we launched a call for university students interested in learning braille and inclusive education. Volunteers were also asked to collect recycled paper, which would later become the base for the tactile materials.

COORDINATION WITH CEBE

Finally, we coordinated with CEBE to validate and apply the educational materials. The center provided support in training sessions and granted braille literacy certification to volunteers who completed the process.

Lessons learned

- **Inclusion requires preparation:** Good intentions aren't enough. Working with people with visual impairments means learning, listening, and adapting every step of the process.
- **Recycling can be a powerful learning tool:** Turning recycled paper into tactile materials showed us that sustainability can also teach, inspire, and connect.
- **Volunteering grows with purpose:** When volunteers understand the impact of their actions, their commitment deepens. The initial training was key to meaningful engagement.
- **Partnerships strengthen impact:** Collaborating with CEBE ensured the materials were relevant and used. Listening to the community made all the difference.
